**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Specification***

The disclosure is objected to because of the following informalities: on page 12, second paragraph, line 3, please change "modal" to "nodal".

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Gilson et al. (U.S. Patent No. 6,336,934). Gilson et al. disclose the invention as claimed including a principal wire (ref. 33, Fig. 11), a capture filter with a filter body (ref. 30 and 31, Fig. 11), support wires (ref. 30, Fig. 11, and Fig. 39), meshed material (ref. 31, Fig. 11), the filter body divided into sets that are twined together to form the support wires (Fig. 39), the mesh size of the material decreasing toward the central part of the concave (Fig. 39), the filaments consisting of a shape-memory alloy (col. 11, line 39), a guide wire joined to the convex side of the filter body, and the nearer ends of the support wires being fixed to a second tubular piece (ref. 32, Fig. 11). Gilson et al. use

Art Unit: 3734

one wire that goes through the filter. It is attached to both ends of the filter. The proximal end can be considered the principal wire while the distal end can be considered the guide wire.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gilson et al. as applied to claim 5 above, and further in view of Greenhalgh (U.S. Patent No. 6,375,670). Gilson et al. disclose the invention substantially as claimed except for the central part of the filter body being joined to the nearer end side of a first tubular piece. Greenhalgh teaches a filter body being joined to the nearer end side of a first tubular piece for the purpose of attachment (ref. 38, Fig. 1). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to have modified Gilson et al. with a filter body being joined to the nearer end side of a first tubular piece for the purpose of attaching the guide wire to the mesh filter body.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christina D. Gettman whose telephone number is 571-272-3128. The examiner can normally be reached on Monday-Friday 8:00 am to 4:30 pm.
